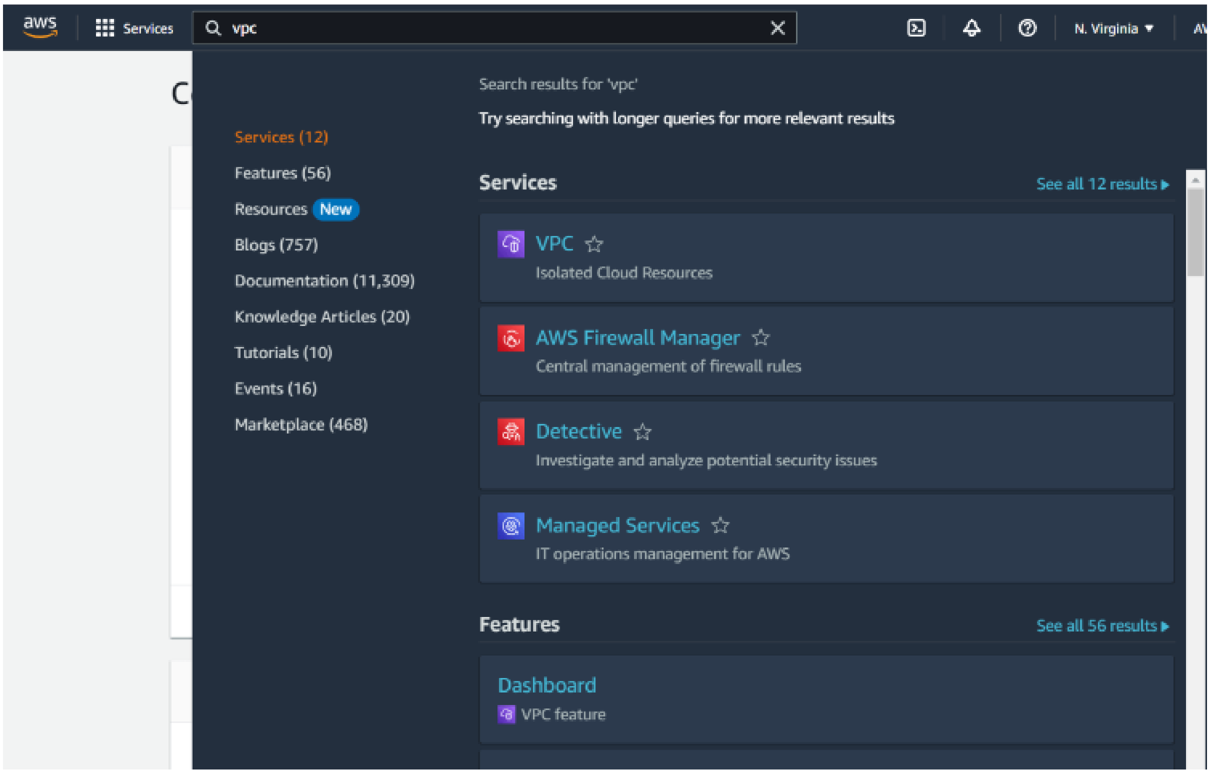
How To Create Custom VPC in AWS: Easy Steps

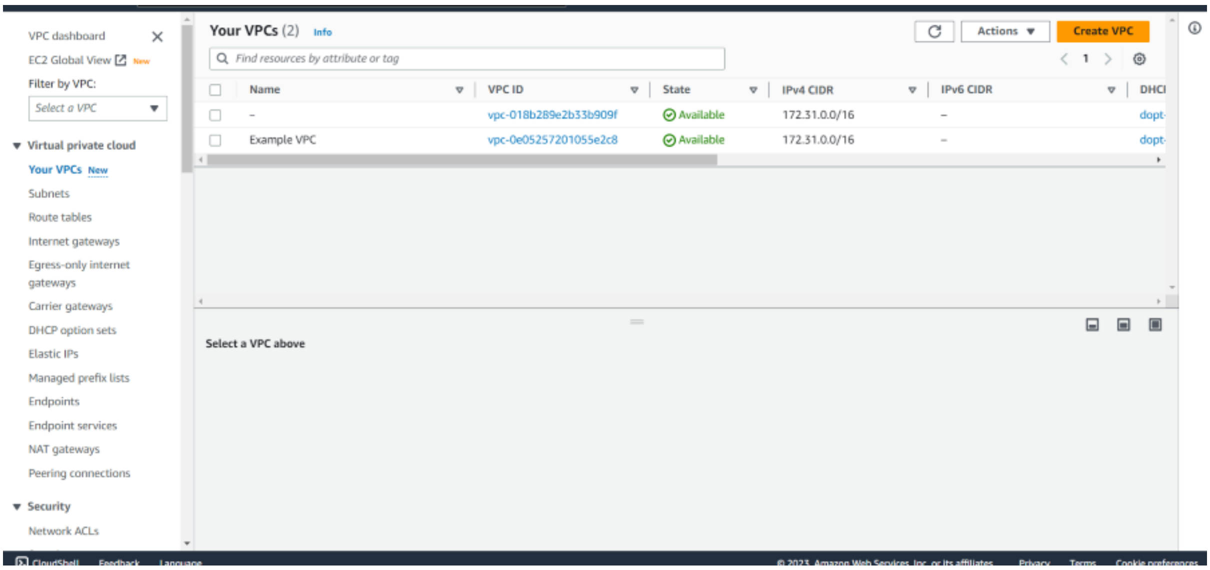
Follow these steps to set up a custom VPC for your AWS environment:

Step 1: Login into to AWS account dashboard. To know how to create an AWS account free tier refer to [Amazon Web Services (AWS) – Free Tier Account Set up.]()

Step 2: From the AWS Management Console, type VPC into the search bar and select VPC under the Networking & Content Delivery section.

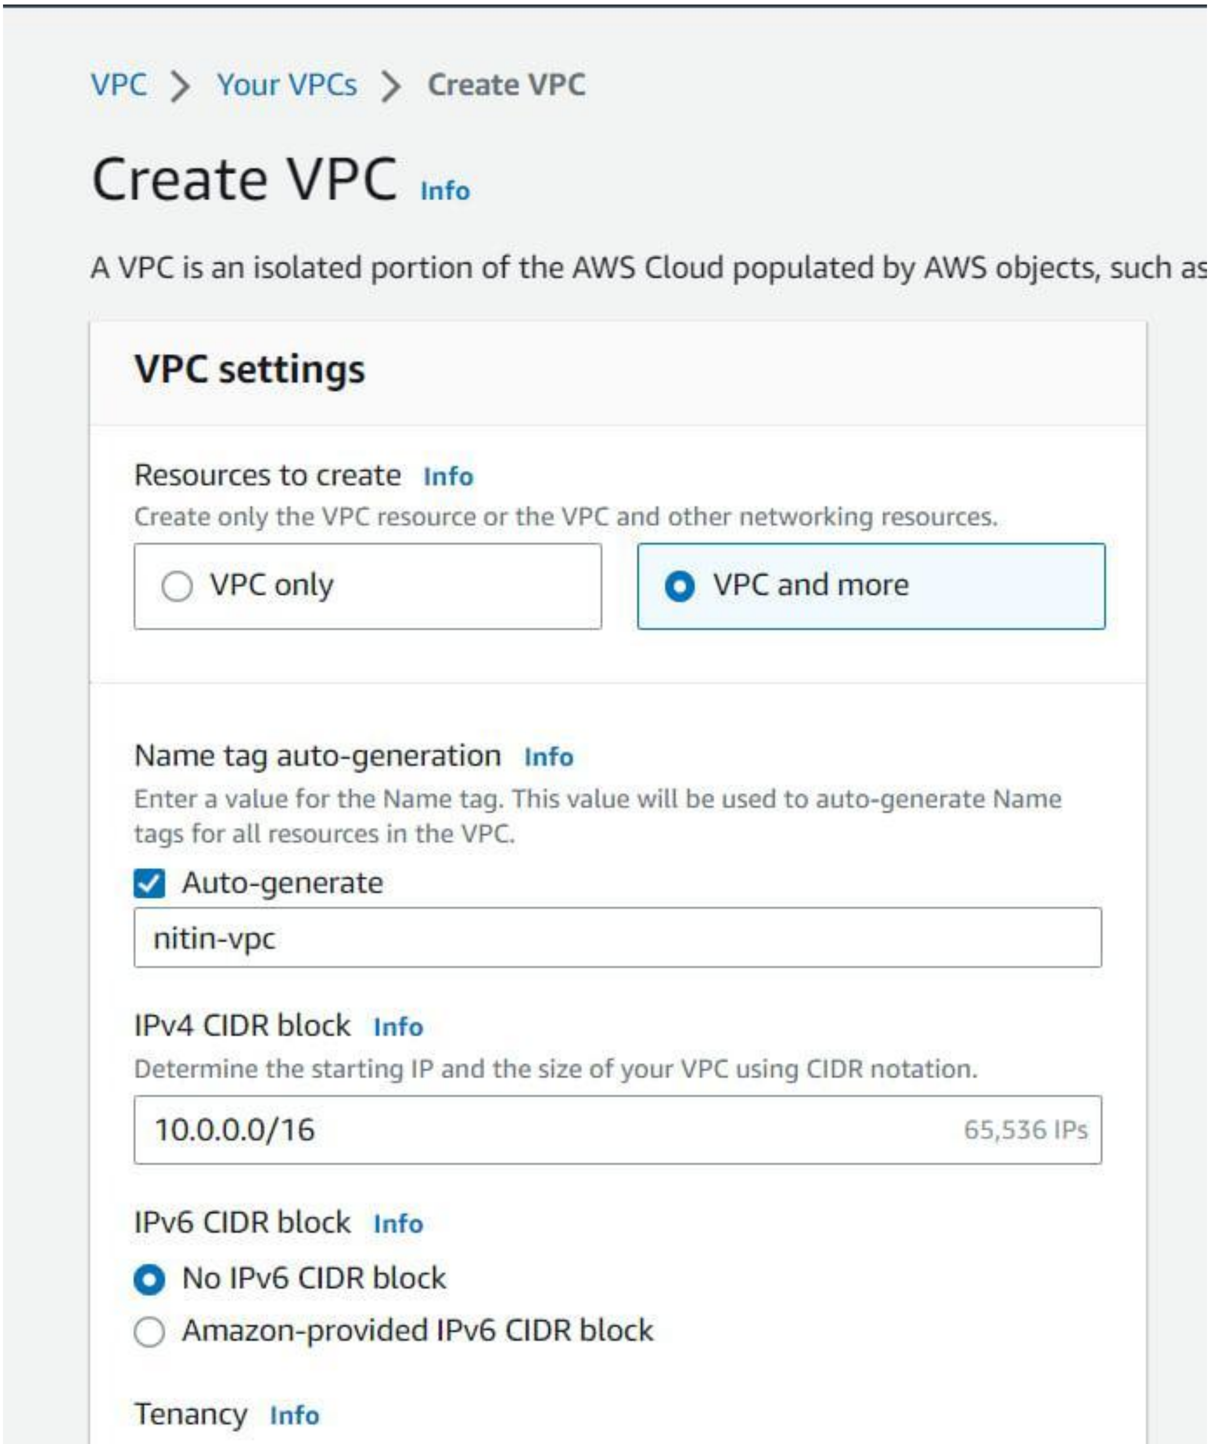


Step 3: In the VPC dashboard, on the left-hand panel, click on Your VPCs and then click the Create VPC button.



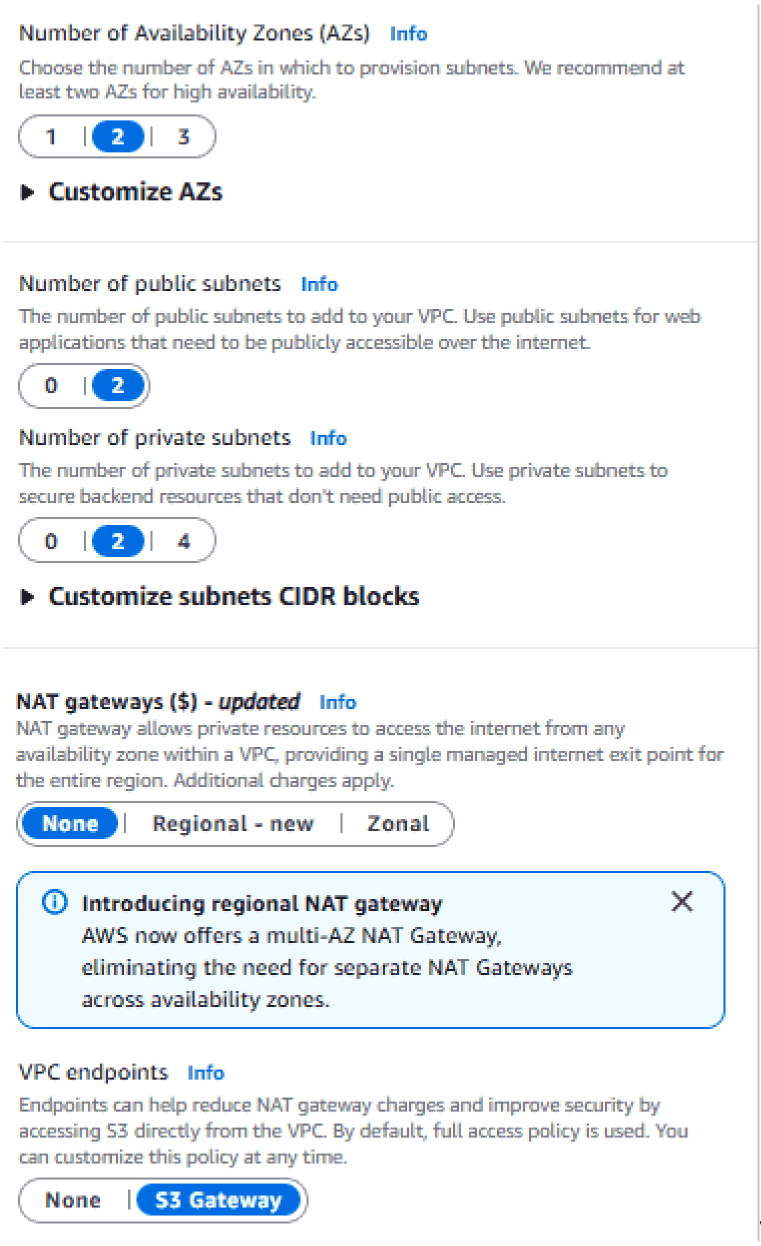
Step 4:

- For Resources to create, choose VPC and more
- For Name tag auto-generation, enter any name you like for example: "Nitin-vpc"
- IPv4 CIDR Block: Enter an IP range for your VPC. A common CIDR block for a VPC is 10.0.0.0/16, which provides 65,536 IP addresses.



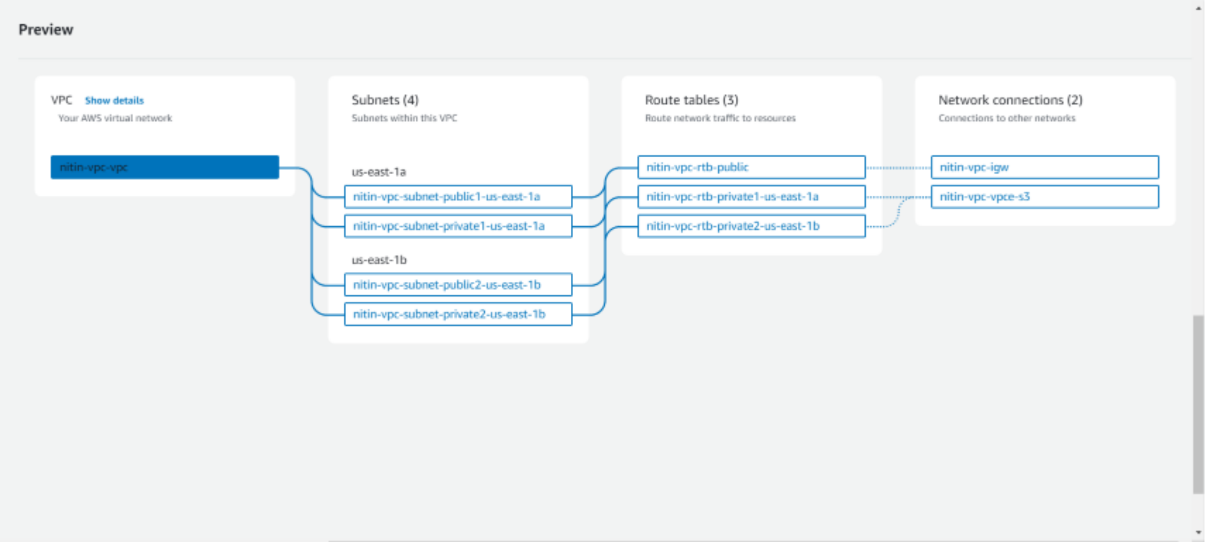
- For Availability Zones (AZs), choose 2.

- For the Number of public subnets, choose 2.
- For the Number of private subnets, choose 2.
- For NAT gateways, choose none
- For VPC endpoints, choose S3 gateway



VPC Settings

Step 5: AWS will show a diagram preview of your VPC configuration. Review it to ensure that your subnets, CIDR blocks, and settings align with your requirements.



Step 6: After configuring all the options, click Create VPC. AWS will begin creating your custom VPC, which might take a minute or two.

Step 7: Once the creation process is complete, click on View VPC to review your settings and make any necessary changes.
