Security recommendations

Add MFA for root user

Add MFA for root user - Enable multi-factor authentication (MFA) for the root user to improve security for this account.

Add MFA

Root user has no active access keys

Using access keys attached to an IAM user instead of the root user improves security.

Step 1

Specify user details

Step 2

Set permissions

Step 3

Review and create

Specify user details

User details

User name

myuser1

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ (hyphen)

☐ Provide user access to the AWS Management Console - optional

If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.

i If you are creating programmatic access through access keys or service-specific credentials for AWS CodeCommit or Amazon Keyspaces, you can generate them after you create this IAM user. [Learn more](#)

Set permissions

Step 3

Review and create

Permissions options

☐ Add user to group

Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.

☐ Copy permissions

Copy all group memberships, attached managed policies, and inline policies from an existing user.

☒ Attach policies directly

Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

Permissions policies (1/1165)

Choose one or more policies to attach to your new user.

Create policy

Filter by Type				
EC2Read	X	All types	1 match	1
☒ Policy name	Type	Attached entities		
☒ <u>AmazonEC2ReadOnlyAccess</u>	AWS managed	0		

► Set permissions boundary - optional

Step 1
[Specify user details](#)

Step 2
[Set permissions](#)

Step 3
Review and create

Review and create

Review your choices. After you create the user, you can view and download the autogenerated password, if enabled.

User details

User name myuser1	Console password type None	Require password reset No
----------------------	-------------------------------	------------------------------

Permissions summary

< 1 >

Name	Type	Used as
AmazonEC2ReadOnlyAccess	AWS managed	Permissions policy

Tags - optional

Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user.

No tags associated with the resource.

Add new tag

You can add up to 50 more tags.
