Actions

Create VPC

Find VPCs by attribute or tag

< 1 > 

☐	Name	VPC ID	State	Encryption c...	Encryption control ...
☐	-	vpc-0623c9b72314c02ef	Available	-	-
☐	vpc1	vpc-0cb4913f970432fa3	Available	-	-

Select a VPC above

 

Create VPC [Info](#)

A VPC is an isolated portion of the AWS Cloud populated by AWS objects, such as Amazon EC2 instances. Mouse over a resource to highlight the related resources.

VPC settings

Resources to create [Info](#)

Create only the VPC resource or the VPC and other networking resources.

☐ VPC only

☒ VPC and more

Name tag auto-generation [Info](#)

Enter a value for the Name tag. This value will be used to auto-generate Name tags for all resources in the VPC.

☒ Auto-generate

harsh-vpc

IPv4 CIDR block [Info](#)

Determine the starting IP and the size of your VPC using CIDR notation.

10.0.0.0/16

65,536 IPs

CIDR block size must be between /16 and /28.

IPv6 CIDR block [Info](#)

☒ No IPv6 CIDR block

☐ Amazon-provided IPv6 CIDR block

Tenancy [Info](#)

Subnets (4)

Subnets within this VPC

eu-north-1a

A harsh-vpc-subnet-public1-eu

A harsh-vpc-subnet-private1-e

eu-north-1b

B harsh-vpc-subnet-public2-eu

B harsh-vpc-subnet-private2-e

Number of Availability Zones (AZs) [Info](#)

Choose the number of AZs in which to provision subnets. We recommend at least two AZs for high availability.

1 | **2** | 3

► Customize AZs

Number of public subnets [Info](#)

The number of public subnets to add to your VPC. Use public subnets for web applications that need to be publicly accessible over the internet.

0 | **2**

Number of private subnets [Info](#)

The number of private subnets to add to your VPC. Use private subnets to secure backend resources that don't need public access.

0 | **2** | 4

► Customize subnets CIDR blocks

NAT gateways (\$) - **updated** [Info](#)

NAT gateway allows private resources to access the internet from any availability zone within a VPC, providing a single managed internet exit point for the entire region. Additional charges apply.

None | Regional - new | Zonal

Introducing regional NAT gateway
AWS now offers a multi-AZ NAT Gateway, eliminating the need for separate NAT Gateways across availability zones.

VPC endpoints [Info](#)

Endpoints can help reduce NAT gateway charges and improve security by accessing S3 directly from the VPC. By default, full access policy is used. You can customize this policy at any time.

None | **S3 Gateway**

DNS options [Info](#)

- ☒ Enable DNS hostnames
- ☒ Enable DNS resolution
