

BEANSTALK

Step 1: Sign Up for AWS Account

If you don't have an AWS account, visit the AWS website (<https://aws.amazon.com/>) and sign up for a new account. Follow the registration process, which will require you to provide necessary details and payment information.

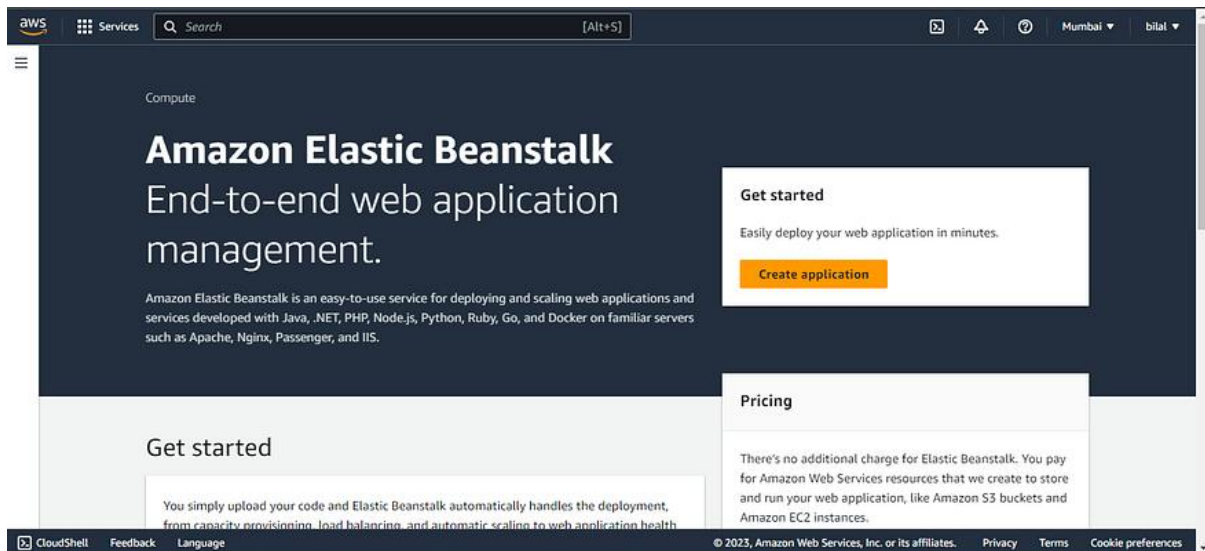

Step 2: Accessing Elastic Beanstalk

Once you have your AWS account set up, log in to the AWS Management Console using your credentials. In the AWS Management Console, you'll find various AWS services listed.

Step 3: Navigate to Elastic Beanstalk

In the AWS Management Console, use the search bar or scroll down to find “Elastic Beanstalk” under the “Compute” section. Click on “Elastic Beanstalk” to access the service.

Step 4: Create an Application

Inside the Elastic Beanstalk dashboard, click the “Create Application” button to begin the application creation process.

Step 5: Provide Application Details

You will be prompted to enter the following application details:

- **Application Name:** Choose a unique and descriptive name for your application.
- **Platform:** Select the platform and language your application is built with. AWS Elastic Beanstalk supports a wide range of platforms, including Java, .NET, Python, Node.js, Ruby, and more.

Step 6: Configure Environment Settings

Next, you’ll need to configure the environment settings for your application. This includes specifying the environment type (Web server environment or Worker environment), platform version, and more. Additionally, you can configure advanced settings for your application’s environment.

Step 7: Upload Your Application Code

Upload your application code or deploy your code directly from your code repository, such as AWS CodeCommit, GitHub, or Bitbucket.

Step 8: Review and Launch

Review all the details you’ve provided to ensure everything is accurate. Double-check your application name, platform, environment settings, and code deployment method. Once you are satisfied, click the “**Create Application**” button to launch your application.
